

ChamberQ — Pain Point, Feature, Solution

A one-page map from what a chamber struggles with today to the exact feature that fixes it.

#	PAIN POINT	FEATURE	SOLUTION
1	Assistant spends the whole day on the phone giving out serials	Online serial booking	Patient books their own serial on their phone — no call needed
2	Patients crowd the room for hours; arguments over turns	Live queue + patient ticket	Ticket shows a live “come around ~X:XX” time, so patients arrive closer to their turn
3	No order in the waiting room — nobody knows who's next	Outdoor screen with voice announce	Screen shows the number and calls it aloud; nobody has to ask or argue
4	A returning patient's history is gone — paper lost, nothing remembered	Patient record + Consult Screen	Last diagnosis and advice appear automatically the moment the patient is called
5	Prescriptions illegible or lost — patient re-describes symptoms	Digital prescriptions, reprintable	Printed with the doctor's credentials, reprinted in one tap any time
6	Doctor doesn't want to type notes during a consult	Voice note, paper photo, or staff entry	Speak briefly, photograph your paper slip, or let staff type medicines after — nothing is compulsory
7	Staff could see sensitive patient information	Doctor-only clinical data	Staff run the queue and bookings; diagnosis and voice notes stay doctor-only
8	Doctor has no real website, only a Facebook post	Branded patient website	A proper site with credentials, chambers, timings, and one clear Book button
9	Family members sharing one phone number get mixed up in records	Household / patient picker	On a known number, the patient chooses who the booking is for — each person keeps a separate record
10	Doctor needs to close for a day — travel, emergency, holiday	Vacation mode / slot blocks	Block a date; existing serials auto-cancel with a one-tap WhatsApp notice to each patient
11	A junior doctor or associate joins with no shared system to hand off to	Multi-doctor / Clinic tier	Associates work in the same system; each doctor keeps their own clinical notes private
12	Practice has multiple chambers or locations to track separately	Multi-chamber support	All chambers, schedules, and bookings live in one place
13	Lab tests are a separate errand for the patient	Lab tests inside booking	Patient adds a lab test to the same appointment — no separate visit needed
14	Doctor fears going digital means losing control of cash or payments	Pay-at-chamber only	No online payment, no gateway commission — same cash flow as today
15	Doctor worries setup will be a hassle	We set it up together	Site, chambers, schedule, and logins built with the doctor — no computer skills needed to go live

Patients still pay at the chamber, in cash — nothing here changes how you're paid. Solo: Tk 15,000 setup / Tk 3,000 per month (1 doctor, up to 5 chambers). Clinic: Tk 75,000 setup / Tk 7,500 per month (multiple doctors, chambers & labs).
